KhataERP product and launch team

8 August 2026

Implementation-ready draft

Application routes, UI, types, database migrations, tests, and security audit

EXECUTIVE BRIEF

01

Sell clarity, control, and confidence

KhataERP is a full-stack accounting ERP for Nepalese small retail and trading businesses. The landing experience should make a complicated category feel simple: run invoices, stock, cash, bank, parties, cheques, and reports from one Nepal-ready system—without requiring every operator to think like an accountant.

Recommended positioning

“Run your business books with confidence—built for Nepal.” Support with: simple daily entries for owners, accounting-correct records for professionals, and a complete view for decisions.

14 days

Existing backend trial duration available for the primary CTA

30+

Meaningful workflows, reports, masters, and settings surfaced in the app

1 system

Accounting, inventory, parties, cash/bank, and cheque operations

Primary outcome

Increase qualified signups by translating feature depth into role-specific outcomes, proving local fit, and removing uncertainty around setup, pricing, data protection, and support.

Business goals

- Make “Start free trial” the dominant conversion path.
- Explain pricing before signup and reduce sales/support questions.
- Show enough product depth to compete with spreadsheet and desktop-accounting habits.
- Establish trust around Nepal VAT/PAN, B.S. dates, NPR formatting, and data controls.

Non-goals for launch

- Do not promise automated tax filing or government integration.
- Do not present payment checkout as live until a billing backend exists.
- Do not claim full team/member administration; current developer UI states it is unavailable.
- Do not publish customer counts, uptime, or testimonials without evidence.

Success measures (first 60 days)

METRIC	LAUNCH TARGET	MEASUREMENT
Hero CTA click-through	≥ 8%	hero_trial_click / landing_view
Signup completion	≥ 35% of signup starts	Funnel from CTA to confirmed account
Pricing engagement	≥ 25% scroll/reach	Section view plus plan interaction
Qualified demo/contact	≥ 3%	Successful form submissions

CODEBASE SCAN

Product capabilities that can be marketed now 02

Verified in application

The following claims are supported by implemented routes, user interfaces, domain types, calculations, tests, and/or PostgreSQL migrations.

PILLAR	VERIFIED CAPABILITY	BUYER OUTCOME
Daily accounting	Sales, purchases, returns, receipts, payments, journal, drafts, beginner-friendly income/expense, and cash/bank contra transfers.	Capture every common movement without maintaining disconnected books.
Invoices & tax	Sales and purchase documents, 13% VAT behavior, optional VAT mode, PAN/VAT identity validation, A4/A5 print preferences, terms and QR text.	Produce consistent records suited to Nepalese business workflows.
Inventory	Items and services, categories, SKU/barcode, main and alternate units, stock adjustments, reorder levels, conditions, weighted-average/FIFO/LIFO valuation.	Know stock quantity, movement, and value —without a second system.
Parties & ledgers	Customers/debtors, suppliers/creditors, unified chart of accounts, hierarchical categories, opening balances, archive/restore, credit-day settings.	See what customers owe, what suppliers are due, and the ledger behind it.
Cheques	Incoming and outgoing cheque workflows, pending/settled views, due/overdue filters, banks and parties, audit history, clearing into Receipt/Payment vouchers.	Track cheque commitments and connect clearance to the books.
Reports	Dashboard, Day Book, Ledger/Group, Registers, Cash & Bank Book, Stock Summary/Ledger, Trial Balance, P&L, Balance Sheet, Cash Flow, VAT, receivable/payable ageing.	Move from transactions to decision-ready financial visibility.
Controls	Nepali B.S. dates/fiscal year, voucher numbering and chronology controls, draft/post/cancel flows, balanced journal enforcement, atomic voucher posting.	Keep books structured while supporting real operational corrections.
Data & security	Supabase Auth, tenant-scoped RLS design, security headers, server-side constraints, portable backup/restore, CSV/report exports, sanitized support error references.	Operate on a cloud foundation with practical access and data safeguards.

Claims boundary

Use “VAT-ready records” or “VAT reporting,” not “IRD filing.” Use “tenant-isolated with Supabase Row-Level Security” only after production migration audit passes. Avoid “bank integration”; the app tracks bank ledgers and cheques but does not connect to bank APIs.

AUDIENCE

03

Speak to the owner first—and reassure the accountant

1. Owner / operator

Context: retailer, wholesaler, or growing trading business managing daily cash, credit, stock, and cheques.

Fears: accounting complexity, unclear cash position, missed dues, stock mismatch.

Message: “Record daily business in plain language and always know where you stand.”

2. Bookkeeper / accountant

Context: responsible for clean ledgers, vouchers, VAT records, statements, and corrections.

Fears: imbalanced entries, uncontrolled edits, incomplete audit trail.

Message: “Beginner-friendly entry on top; accounting-correct journals underneath.”

3. Inventory-led business

Context: many SKUs, alternate units, purchases, returns, damage/expiry, reorder decisions.

Fears: stockouts, overbuying, wrong margin, spreadsheet drift.

Message: “Invoices and inventory update together, with valuation and item-level movement.”

4. Multi-company operator

Context: founder or accountant handling more than one legal/business entity.

Fears: data mixing and repeated setup.

Message: “Keep company books isolated and switch within a licensed company workspace.”

Message hierarchy

1 — Local relevance

Nepali B.S. dates, fiscal-year behavior, NPR formatting, VAT/PAN workflows.

2 — Ease

Simple Income and Expense entries remove debit/credit terminology from daily work.

3 — Completeness

Invoices, inventory, cash/bank, parties, cheques, and reports in one product.

4 — Integrity

Balanced posting and backend validation preserve accounting correctness.

Message house

LAYER	APPROVED LANDING COPY DIRECTION
Core promise	Run your business books with confidence—built for Nepal.
Supporting line	Create invoices, track stock and cheques, manage cash and bank, and understand your reports from one simple cloud ERP.
Proof point 1	Plain-language income and expense capture, backed by balanced journal entries.
Proof point 2	Incoming and outgoing cheque tracking that posts Receipt or Payment vouchers when cleared.
Proof point 3	Financial statements and detailed operational reports generated from the same books.

Tone

Clear, calm, precise, locally grounded, and never patronizing. Prefer “money received,” “money paid,” and “what customers owe” near the top; introduce formal accounting terms deeper on the page.

INFORMATION ARCHITECTURE

A focused homepage with evidence-rich detail pages

04

ROUTE	PURPOSE	REQUIRED CONTENT
/	Primary conversion landing page	Hero, product proof, workflows, features, local fit, security, pricing, FAQs, repeated CTA.
/features	Complete capability guide	Accounting, invoicing, inventory, parties, cheque management, reports, controls, data.
/pricing	Commercial clarity	Monthly/annual toggle, plan comparison, trial rules, module note, FAQ, sales contact.
/security	Trust and architecture	Auth, RLS/tenant boundaries, encrypted transport, backups, permissions, responsible claims.
/resources	Education and SEO	Help articles, Nepal accounting guides, product updates, templates, migration help.
/contact	Qualified assistance	Demo/support form, expected response time, optional WhatsApp/phone when confirmed.
/login, /signup	Product access	Reuse the existing authentication experience; preserve deep-link intent after sign-in.

Homepage section order

1. **Announcement + navigation:** product name, Features, Pricing, Security, Resources, Sign in, Start free trial.
2. **Hero:** one outcome headline, concise product sentence, primary/secondary CTA, real dashboard visual.
3. **Local proof strip:** B.S. dates · NPR · VAT-ready · Cloud access · 14-day trial.
4. **Problem-to-value:** replace disconnected spreadsheets, manual ledgers, and forgotten cheque follow-ups.
5. **Workflow proof:** invoice → stock/party/ledger → dashboard/reports.
6. **Feature pillars:** six outcome-led blocks with real screenshots.
7. **Simple vs. powerful:** demonstrate simple income/expense layered on double-entry integrity.
8. **Cheque management:** incoming/outgoing lifecycle and accounting sync.
9. **Reports gallery:** operational and statutory-style views from one dataset.
10. **Security/data ownership:** precise, verified trust statements.
11. **Pricing:** three proposed plans plus comparison and trial CTA.
12. **FAQ + final CTA + footer.**

Navigation requirement

Keep “Start free trial” visually persistent on desktop and mobile. Header becomes compact after scroll. Mobile menu must expose Pricing and Sign in without requiring accordion expansion.

Conversion paths

Self-serve

Landing → Pricing → Start trial
→ Signup → company setup.

Trust-led

Landing → Security → Features
→ Start trial.

Complex buyer

ACCOUNTING AND INVENTORY, MADE PRACTICAL

Run your business books with confidence—built for Nepal.

Create invoices, track stock and cheques, manage cash and bank, and understand your reports from one simple cloud ERP.

Start 14-day free trial

Explore features

No card required

CONFIRM POLICY

Setup in minutes

VALIDATE CLAIM

Hero requirements

- Use an actual dashboard capture in a framed browser/app shell.
- Text must not imply automated filing, bank feeds, or mobile apps.
- Primary CTA opens signup; secondary scrolls to product proof or /features.
- Hero image has descriptive alt text and a width/height reservation to prevent layout shift.

Proof strip copy

Nepali B.S. dates

NPR-ready

VAT optional

Inventory valuation

Cheque tracking

Cloud backup

Use product capability labels, not unsupported customer or compliance logos.

Key storytelling modules

MODULE	HEADLINE DIRECTION	VISUAL EVIDENCE
One connected workflow	"Enter it once. See it everywhere it matters."	Invoice flowing to stock, party ledger, dashboard, and reports.
Easy daily entry	"No debit and credit terminology needed."	Simple Income / Expense form with auto-generated balanced lines.
Cheque control	"Know what is coming in—and going out."	Incoming/outgoing dashboard and clearance status.
Decision visibility	"Move from transactions to a complete financial picture."	P&L, Balance Sheet, Cash Flow, ageing, stock ledger.

FEATURE REQUIREMENTS

Organize depth into six buyer-friendly pillars

06

Invoices & daily transactions

Sales and purchase documents, returns, receipts, payments, drafts, journal entries, simple income/expense, contra, editable rates and line totals, automatic totals.

CTA: See invoicing and transactions

Inventory & items

Products and services, SKU/barcode, categories, main/alternate units, reorder levels, stock conditions and adjustments, Weighted Average/FIFO/LIFO valuation.

CTA: Explore inventory control

Parties & accounts

Customers, suppliers, debtors/creditors, credit days, opening balances, structured chart of accounts, grouped ledgers and inline master creation.

CTA: Understand parties and ledgers

Incoming & outgoing cheques

Receive or issue, track pending/due/overdue/settled, record banks, view party exposure, print details, and create linked Receipt/Payment vouchers on clearance.

CTA: See cheque management

Reports & dashboard

Sales/purchase trends, cash flow, top items, low stock, cheque KPIs, Day Book, ledgers, registers, Cash & Bank, stock, statements, VAT, ageing.

CTA: View report gallery

Controls, data & configuration

B.S. fiscal years, voucher prefixes/numbering, chronology controls, VAT mode, print formats, terms/QR text, export/import, portable backup/restore, cancellation.

CTA: Review controls and security

Mandatory feature-page behavior

- Each pillar begins with an outcome statement before its capability list.
- Every screenshot receives a concise caption describing the completed task, not the UI noun.
- Use a sticky sub-navigation on desktop and horizontally scrollable chips on mobile.
- All “available” labels must be generated from a marketing feature configuration—not copied from backend permission names.
- Cheque Management must be marked as a configurable module if sold separately or excluded from a plan.

Recommended differentiator block

Simple when you need it. Accounting-correct underneath. Show the Simple Income form beside its generated debit/credit journal. This demonstrates accessibility without sacrificing professional trust.

Required screenshot set

PRIORITY 1	PRIORITY 2	PRIORITY 3
Dashboard overview Sales invoice form Simple Income entry Stock Summary	Incoming/outgoing cheque dashboard P&L / Balance Sheet Receivables ageing Cash & Bank Book	Chart of Accounts Item/alternate unit form Day Book navigation Settings/backup

COMMERCIAL MODEL

Proposed launch pricing

07

Recommendation—not current billing

The application supports company plan status, a 14-day trial, company creation limits, and module entitlements. It explicitly has no separate billing backend. Prices and packaging below require founder approval and entitlement implementation before public launch.

Starter

For a small business moving from notebooks or spreadsheets.

Rs 999

per company / month

- Core sales and purchase
- Receipts and payments
- Parties and ledgers
- Core financial reports
- Portable backup/export

[Start free](#)
Recommended
Business

For stock-led retailers and traders needing complete operations.

Rs 1,999

per company / month

- Everything in Starter
- Inventory and valuation
- Returns and advanced reports
- Receivable/payable ageing
- Cheque Management included

[Start free](#)
Multi-company

For owners and accounting practices operating several books.

Custom

annual agreement

- Everything in Business
- Licensed company allowance
- Assisted onboarding
- Priority support
- Custom module terms

[Contact sales](#)
Annual option

Recommend “Pay for 10 months, use for 12” (Starter Rs 9,990/year; Business Rs 19,990/year). Show monthly equivalent, total billed amount, and cancellation/refund terms. All amounts must state whether VAT is included.

Pricing requirements

REQUIREMENT	DECISION / IMPLEMENTATION RULE
Trial	Use the existing 14-day company trial. Confirm whether card-free before publishing that claim.
Plan enforcement	Create one source of truth mapping marketing plan → company limit → included modules → plan status. Do not rely on display copy alone.
Cheque module	Current module catalogue defaults its price to zero. Decide whether it is included in Business or sold as an add-on.
Checkout	Until a payment backend is installed, use trial signup plus Contact Sales/manual activation. Never render a fake “Buy now.”
Price source	Store public prices in validated server or deployment configuration; do not duplicate hard-coded values across pages.
Terms	Publish renewal, cancellation, data access after expiry, support scope, and tax treatment.

TRUST REQUIREMENTS

08

Trust must be specific, verifiable, and visible

Approved security themes

- Supabase email/password authentication.
- Tenant-scoped Row-Level Security design.
- HTTPS-only production configuration and security headers.
- Server-side validation for identity and accounting integrity.
- Portable backup and report exports.
- Sanitized UI errors with support reference IDs.

Claims requiring deployment proof

- “Production RLS verified” only after the live security audit returns zero failures.
- “Encrypted at rest” only with provider documentation/confirmation.
- Do not claim exact uptime without monitoring and an SLA.
- Do not claim regulatory certification, automatic filing, or bank-grade security.
- Publish privacy, terms, and data deletion language before launch.

Content inventory

ASSET	OWNER / SOURCE	ACCEPTANCE REQUIREMENT
Logo and wordmark	Founder / brand designer	SVG + dark/light variants, favicon, social avatar.
Product screenshots	Staging product	Seeded demo company; no personal or real financial data; consistent browser size.
90-second overview	Product marketing	Captions, poster image, no auto-play audio, compressed WebM/MP4.
Customer proof	Founder / early adopters	Written permission, role/company, outcome that can be substantiated.
Pricing and terms	Founder / finance / legal	Approved NPR amounts, VAT treatment, renewals, cancellations, support.
Help and onboarding	Product/support	Setup checklist, import guidance, contact method, response expectation.

Core FAQ copy requirements

- Is KhataERP made for Nepal?
 - Can I use it without accounting knowledge?
 - Does it support VAT and PAN?
 - Can I track stock and services?
- How do incoming/outgoing cheques work?
 - Can I export or back up my data?
 - What happens after the 14-day trial?
 - Can I manage more than one company?

Privacy-by-design requirement

Demo screenshots and videos must use synthetic records. Contact forms collect only what is needed, include consent text, and define retention. Marketing analytics must not receive voucher, party, PAN, phone, or financial values.

EXPERIENCE SYSTEM

09

Professional enough for finance. Friendly enough for owners.

ELEMENT	REQUIREMENT
Visual direction	Deep navy foundation (#1B2A4A), violet accent inspired by the current product asset, warm off-white surfaces, emerald for positive/proof states. Avoid generic fintech neon overload.
Typography	Use a highly legible sans for body/UI and a restrained editorial serif for major headlines, matching the product's existing IBM Plex/Tinos character where practical.
Imagery	Prioritize real UI and workflow diagrams. If people imagery is used, make it recognizably Nepalese and operational—not stock-photo boardrooms.
Motion	Subtle section reveal and product-flow animation only; respect prefers-reduced-motion. No auto-rotating carousels.
Mobile	CTA remains obvious; comparison tables become accessible cards; screenshots stay readable with tap-to-expand; no horizontal page overflow.

Accessibility acceptance (WCAG 2.2 AA target)

- Semantic landmarks and one H1 per route. - Keyboard-visible focus on every interactive element. - Logical tab and heading order. - Forms have labels, instructions, and field-level errors. - Dialogs/menus manage focus correctly.	- Text contrast $\geq 4.5:1$; large text $\geq 3:1$. - Touch targets at least 44×44 CSS pixels. - Images have meaningful alt text or are decorative. - Video includes captions and transcript. - Pricing meaning is not conveyed by color alone.
---	--

Responsive breakpoints

320–639 Single column; compact sticky CTA; pricing cards; menu drawer.	640–1023 Two-column features; screenshots alternate; pricing remains stacked or 2+1.	1024–1439 Full navigation; split hero; three-plan pricing; sticky section anchors.	1440+ Max content width 1200–1280px; no uncontrolled stretching.
---	---	---	---

Performance budgets

METRIC	TARGET (75TH PERCENTILE, MOBILE)	IMPLEMENTATION NOTE
LCP	≤ 2.5 s	Preload critical font; optimize hero screenshot; SSR/static pre-render.
INP	≤ 200 ms	Minimal client JS; defer video and analytics.
CLS	≤ 0.1	Reserve media dimensions; stable font fallback.
Initial JS	≤ 170 KB gzip goal	Marketing bundle separated from authenticated ERP.

IMPLEMENTATION REQUIREMENTS

Keep marketing public, fast, measurable, and isolated

10

Architecture

- Add public marketing routes outside the authenticated AppShell.
- Static render or pre-render public pages for crawlability and speed.
- Reuse design tokens, but do not load ERP state or Supabase business tables on landing pages.
- Lazy-load video, heavy galleries, and non-critical analytics.
- Deploy canonical redirects and a generated sitemap/robots file.

Configuration

- Central typed configuration for plans, features, FAQs, testimonials, and contact details.
- Environment-aware public URLs and canonical host.
- Feature flags for unpublished pricing, demo form, and video.
- No secrets in VITE_* values; marketing forms use a trusted server/edge endpoint.
- Preserve existing CSP/security headers and explicitly allow only required services.

SEO requirements

AREA	REQUIREMENT
Homepage title	KhataERP — Accounting, Inventory & Cheque Software for Nepal
Description	Plain-language value proposition including invoicing, stock, cash/bank, reports, and Nepal relevance; 150–160 characters.
Intent clusters	Accounting software Nepal; billing/inventory software Nepal; VAT invoice software Nepal; cheque management; small business ERP Nepal.
Structured data	SoftwareApplication, Organization, FAQPage, BreadcrumbList; pricing only when approved and accurate.
Social	Open Graph/Twitter cards with 1200×630 branded image and route-specific copy.
Technical	Canonical URL, sitemap, indexable static content, 404, no duplicate / and marketing-route content.

Analytics event taxonomy

EVENT	PROPERTIES (NON-SENSITIVE)	PURPOSE
marketing_page_view	route, referrer_group, campaign	Traffic and acquisition.
cta_click	location, label, destination	Compare hero, pricing, and final CTA.
feature_view	feature_key, position	Understand interest.
pricing_plan_select	plan_key, billing_period	Commercial intent.
signup_start	source, plan_key	Funnel start.
contact_submit	request_type, source	Lead completion; never include message text.

DELIVERY

11

Launch in four controlled phases

1 — Foundation

Messaging, plan decisions, route architecture, content config, analytics specification.

2 — Build

Homepage, Features, Pricing, Security, Resources shell, Contact, legal footer.

3 — Proof

Seed demo data, capture screenshots/video, add FAQs and approved testimonials.

4 — Launch

QA, performance, accessibility, security, SEO, analytics, redirects, monitoring.

Definition of done

Product & content

- Every feature claim is traceable to implemented behavior or labeled “coming soon.”
- Pricing, VAT treatment, terms, trial, support, and add-ons approved.
- All screenshots use synthetic staging data.
- Primary CTA reaches a working signup path; Contact path is deliverable and monitored.
- No placeholder copy or unverifiable social proof remains.

Quality & operations

- Chrome, Edge, Firefox, Safari; 320px through large desktop.
- Keyboard, screen reader smoke test, contrast audit, reduced motion.
- Core Web Vitals budgets pass on production-like hosting.
- Metadata, sitemap, structured data, canonical links, 404 verified.
- Analytics validated without personal/financial payloads.

Launch gates

GATE	PASS CONDITION
Commercial	Founder signs off pricing, plan entitlements, VAT inclusion, payment path, renewal/cancellation rules.
Security	Production Supabase security audit returns zero failures; exact production URLs and headers verified.
Support	Published contact route, response expectation, onboarding owner, and trial-expiry process.
Reliability	Error monitoring, uptime checks, backup expectations, and rollback procedure active.
Legal/privacy	Terms, Privacy Policy, cookie/analytics disclosure, data deletion/contact process reviewed.

Highest launch risk

Public pricing before backend entitlements and payment operations are aligned. Mitigation: launch self-serve trial immediately, use manual sales activation initially, and enable paid checkout only after plan enforcement and lifecycle testing.

DECISION REGISTER

12

What must be confirmed before implementation

#	DECISION	RECOMMENDED DEFAULT
1	Public launch prices	Starter Rs 999/month; Business Rs 1,999/month; Multi-company custom.
2	Annual discount	Two months free; display total billed amount and VAT treatment.
3	Card requirement	Card-free 14-day trial if operations can support it; otherwise remove claim.
4	Cheque packaging	Include in Business; configurable add-on for Starter only if supportable.
5	Multi-user promise	Do not market member limits until member management is production-ready.
6	Payment path	Trial + assisted/manual activation at launch; integrate checkout in phase two.
7	Support channel	Email/contact form plus one confirmed local channel; publish response hours.
8	Language	Launch in English with Nepal-relevant terminology; add Nepali localization later.

Implementation handoff checklist

- Approved message house and page copy.
- Signed plan/entitlement matrix.
- Brand assets and social image.
- Seeded staging company and screenshot brief.
- Public plan/feature configuration schema.
- Marketing route map and redirects.
- Analytics implementation sheet.
- Privacy/terms/security page copy.
- Test matrix and launch owner.
- Post-launch dashboard and review cadence.

Final product principle

The landing page should feel like KhataERP itself: clear for a first-time business owner, complete for an experienced operator, and structurally trustworthy for an accountant.

Recommended next action

Approve the eight decisions above, then convert this PRD into final landing-page copy, a responsive design, and an implementation backlog. Capture the real product screenshots only after the staging demo company is polished and free of personal data.

Product scope verified

Pricing awaiting approval
